

Digital Labs Full Stack Web Development Internship Assignment

Overview

Welcome to the HAQMS Engineering Evaluation Assignment.

You will be working on an existing full-stack hospital management application that intentionally contains:

- security vulnerabilities
- performance bottlenecks
- database inefficiencies
- frontend issues
- concurrency problems
- incomplete features

Your objective is to identify, debug, optimize, secure, and improve the application as much as possible.

Repository

GitHub Repository:

<https://github.com/TechFigitablLabs/HAQMS.git>

Please fork the repository before starting your work.

Tech Stack

- Frontend: Next.js + Tailwind CSS
 - Backend: Node.js + Express
 - Database: PostgreSQL + Prisma ORM
-

Setup Instructions

Please follow the setup instructions mentioned in the repository README carefully.

You are expected to:

1. Setup the project locally
 2. Run the database and seed data
 3. Explore the application
 4. Identify issues
 5. Implement fixes and improvements
-

Important Notes

- You are allowed to use AI tools such as ChatGPT, Claude, Cursor, GitHub Copilot, etc.
- However, your understanding, implementation quality, and engineering decisions will be evaluated carefully.
- Focus on writing maintainable, scalable, and production-quality code.

You are NOT expected to fix everything.

We are more interested in:

- prioritization
 - debugging approach
 - code understanding
 - reasoning behind your fixes
-

Submission Requirements

Please submit the following:

1. Updated GitHub Repository

Forked repository containing your changes.

2. Deployed Application URL

Deploy your updated application and share the live URL.

3. Documentation

Share a short document containing:

- issues identified
- fixes implemented
- optimizations performed
- remaining known issues
- approach and reasoning behind major decisions

Preferred formats:

- Google Docs
- Notion
- Markdown
- PDF

4. Video Demonstration

Record a short video walkthrough (5–15 mins preferred) explaining:

- major issues identified
- fixes implemented
- optimizations done
- application flow
- your overall approach

You may upload the video to:

- Google Drive
- Loom
- YouTube (Unlisted)

and share the link in the submission form.

Submission Deadline

Please submit your assignment within **2 days** of receiving this assignment.

Late submissions may not be considered.

Submission Form

Submit your final solution using the Google Form below:

<https://forms.gle/n37n5xprky4SKRVn7>

Required fields:

- Full Name
 - Email Address
 - Resume Link
 - Updated GitHub Repository URL
 - Deployed Application URL
 - Documentation Link
 - Video Demonstration Link
-

Suggested Time

Approximate expected effort:

4–8 hours

Good luck!
